

BMW AND MINI BRAKES

- IT'S NOT JUST THE PADS

Let's face it. Brakes are important and reliable stopping is paramount. It's a common misconception that you only need to replace the brake pads. This may have been the case many years ago, but in recent times the performance of your BMW and MINI brakes has increased dramatically, enabling more dynamic and effective stopping performance time after time. This combined with features like Dynamic Stability Control, Corner Brake Control and Traction Control all increase the demands on the brake system, resulting in an increased demand on the braking components. This takes its toll on not only the brake pads, but also the brake rotors which suffer heat stress and wear.

That's why here at Stokes and Renk BMW and MINI service we always recommend to replace the brake pads, rotors and wear indicators as a complete set. This will give you optimal performance and reliability from your BMW or MINI brake system along with extended service life.

Here at Stokes and Renk in Subiaco we are your BMW and MINI brake specialists. We stock a large range of OE quality TEXTAR or genuine BMW brakes and are able to offer specialist advice on all aspects of your vehicle.
